FOR IMMEDIATE RELEASE

Wilms Cancer Foundation Expands Global Wilms Tumor WebApp™ to 15 Languages, Strengthening Worldwide Access to Childhood Kidney Cancer Information

Addition of Cantonese, Russian, Japanese and Swahili builds on 11 existing languages, advancing the Foundation's commitment to accessible childhood kidney cancer education worldwide.

WASHINGTON, DC – October 20, 2026 – The Wilms Cancer Foundation (WCF), an international charitable organisation dedicated to improving outcomes for children affected by Wilms tumor and other childhood kidney cancers, has announced the expansion of its Global Wilms Tumor WebApp™ with the introduction of four additional languages: **Cantonese, Russian, Japanese and Swahili**.

The four new languages supplement the WebApp's™ existing catalogue of 11 languages - **English, French, German, Italian, Spanish, Portuguese, Arabic, Persian (Farsi), Hindi, Mandarin and Korean** - bringing the total number of supported languages to **15**.

This significant expansion represents another important milestone in the Foundation's commitment to removing language barriers and improving access to reliable, evidence-based childhood kidney cancer information for families, caregivers, healthcare professionals and patient advocacy organisations worldwide.

The expanded language offering strengthens the platform's international accessibility, supporting communities across Europe, Asia, Africa, the Middle East and the Americas.

Breaking Down Language Barriers in Childhood Kidney Cancer Care

Wilms tumor, also known as nephroblastoma, is the most common form of kidney cancer in children. Although treatment outcomes can be favourable in countries with well-established paediatric oncology services, significant disparities remain in access to timely diagnosis, specialist treatment, reliable information and supportive care. Language barriers can further complicate these challenges, particularly for families navigating an unfamiliar diagnosis or seeking to understand complex medical information. The Global Wilms Tumor WebApp™ was developed to help address these difficulties by providing accessible, understandable and evidence-based information through a single, internationally available digital platform. With educational information now offered in 15 languages, the Foundation is extending its ability to support families and healthcare communities across a wide range of linguistic and geographical settings.

Expanding Access Across International Communities

The four additional languages will support broader engagement with families, medical communities and childhood cancer organisations across several important geographical regions.

- **Cantonese:** Supporting Cantonese-speaking families and communities, particularly in Hong Kong, southern China and international Chinese diaspora populations.
- **Russian:** Extending accessibility to Russian-speaking communities across Eastern Europe, Central Asia and other regions.

- **Japanese:** Providing Japanese-speaking families and healthcare professionals with access to the Foundation's educational and support resources.
- **Swahili:** Expanding opportunities to reach families and healthcare communities across East Africa, including Tanzania, Kenya, Uganda and neighbouring countries.

Together with the existing 11 languages, these additions significantly broaden the potential reach of the Foundation's educational resources.

By making childhood kidney cancer information available in multiple languages, the Foundation aims to improve understanding of Wilms tumor symptoms, diagnosis, treatment pathways, survivorship and the practical challenges faced by families during childhood cancer treatment.

Supporting the Global Wilms Tumor Initiative

The multilingual expansion forms part of the Foundation's wider **Global Wilms Tumor Initiative™ (GWTI)**, an international programme designed to strengthen childhood kidney cancer awareness, education, advocacy and collaboration.

Through the GWTI, the Foundation is working to improve access to reliable information, support earlier recognition of childhood kidney cancer symptoms, strengthen connections between families and healthcare communities, and address disparities affecting children in resource-limited settings.

The expansion also complements the broader objectives of the World Health Organization's Global Initiative for Childhood Cancer (GICC), which seeks to improve childhood cancer survival and reduce inequalities in outcomes internationally.

By developing scalable, multilingual digital resources, the Foundation aims to contribute to these global objectives while strengthening its ability to support regional and country-level childhood cancer initiatives.

A Global Resource for Families and Healthcare Professionals

The Global Wilms Tumor WebApp™ provides free access to a growing collection of childhood kidney cancer information and support resources. Designed for use on smartphones, tablets and computers, the platform brings together information addressing important stages of the childhood kidney cancer journey, including:

- Early signs, symptoms and diagnosis of Wilms tumor.
- Understanding staging and treatment options.
- Surgery, chemotherapy and radiotherapy.
- Relapsed and recurrent Wilms tumor.
- Nutrition and supportive care during treatment.
- Survivorship, follow-up care and potential long-term effects.
- Practical guidance and educational support for parents and caregivers.

The platform is intended to complement, rather than replace, professional medical advice and treatment provided by qualified healthcare teams.

Strengthening International Childhood Cancer Education

Commenting on the expansion, **TJ Hodgkinson, Founder and Chief Executive Officer of the Wilms Cancer Foundation**, said:

"Every family facing a childhood cancer diagnosis deserves access to clear, reliable and understandable information, regardless of where they live or which language they speak.

"With the addition of Cantonese, Russian, Japanese and Swahili, our Global Wilms Tumor WebApp™ now supports 15 languages. This is an important milestone in our efforts to create a genuinely international resource for childhood kidney cancer.

"Our objective is to remove as many barriers as possible between families and the information they need, while also supporting healthcare professionals and organisations working to improve childhood kidney cancer outcomes.

"As we continue expanding the platform, we are building the foundations of a global information and support network that can reach families in their own languages, strengthen international collaboration and contribute to more equitable access to childhood cancer education."

Building a More Accessible Global Childhood Kidney Cancer Network

The Foundation intends to continue expanding the linguistic and geographical reach of the Global Wilms Tumor WebApp™ as part of its longer-term international development strategy. Future priorities include broadening multilingual educational resources, strengthening collaboration with regional childhood cancer organisations, supporting healthcare professionals in underserved communities and integrating additional information and support services into the platform. These developments form part of the Foundation's wider ambition to establish a globally accessible childhood kidney cancer education and support ecosystem, connecting families, healthcare professionals, researchers, advocacy organisations and international partners.

The Global Wilms Tumor WebApp™ is available free of charge at:
